DETAILED ACTION

The preliminary amendment filed on 6 February 2006 in which claim 74 was cancelled, and claims 3, 4, 6, 7, 16, 24 and 27-30 were amended, is acknowledged.

Claims 1-73 and 75-78 are pending in the instant application.

Priority

This application is a National Stage entry of PCT/EP2004/008818 filed on 6 August 2004 and claims priority to EPO foreign application 04005874.5 filed on 11 March 2004, PCT/EP03/08858 filed on 8 August 2003, PCT/EP03/08829 filed on 8 August 2003, and PCT/EP03/08859 filed on 8 August 2003, and U.S. provisional application no. 60/552,281 filed on 11 March 2004. A certified copy of the foreign priority documents in English has been received.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

I. Group I, claim(s) 1-51 and 53, drawn to a method for preparing a conjugate comprising a protein and a polymer, or a derivative thereof, wherein the polymer is HAS and the protein is G-CSF.

II. Group II, claim(s) 52, 54-73, 75 and 76, drawn to a conjugate comprising a protein and a polymer, or a derivative thereof, having the structures as recited in the claims.

Page 3

III. Group III, claim(s) 77 and 78, drawn to a method for the treatment of a disorder characterized by reduced hematopoietic or immune function.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features.

An international application should relate to only one invention or, if there is more than one invention, the inclusion of those inventions in one international application is permitted if all inventions are so linked as to form a single general inventive concept (PCT Rule 13.1). With respect to a group of inventions claimed in an international application, unity of invention exists only when there is a technical relationship among the claimed inventions involving one or more of the same or corresponding special technical features.

The expression "special technical features" is defined in PCT Rule 13.2 as meaning those technical features that define a contribution which each of the inventions, considered as a whole, makes over the prior art. The determination is made on the contents of the claims as interpreted in light of the description and drawings (if any). Whether or not any particular technical feature makes a "contribution" over the prior art, and therefore constitutes a "special technical feature," should be considered with respect to novelty and inventive step.

Art Unit: 1623

The common technical feature in all groups is a hydroxyalkyl starch conjugate of a granulocyte colony stimulating factor. This element cannot be a special technical feature under PCT Rule 13.2 because the element is shown in the prior art. In this case, WIPO publication WO 2002/080979 to Sommermeyer et al. (IDS dated 26 December 2006; PG Pub No. US 2005/0063943 A1 used as English equivalent, PTO-892, Ref. A) discloses compounds comprising a conjugate of HAS and an active agent. For coupling the active ingredient to the HAS, it may be necessary in a first step to introduce an active group into the active ingredient and/or the HAS (paragraph 0052). The HAS can be oxidized before binding to the active ingredient, such as by selective oxidation of the reducing end groups of HAS (paragraph 0126). This facilitates processes in which the oxidized reducing end group of the HAS reacts with an amino group of the active ingredient resulting in the formation of an amide. The active ingredient and the HAS can also be coupled to each other by use of a linker (paragraph 0053). Sommermeyer et al. teach that the active ingredient can be any compound disclosed in the pharmacopeia, and can be a hormone, steroid, lipid, protein, oligopeptide, polypeptide, or a nucleic acid (paragraph 0045). Sommermeyer et al. further teach that polymer-polypeptide conjugates wherein the polypeptide is G-CSF is known in the art (paragraph 0009 and 0010). Thus, it would have been prima facie obvious for one of ordinary skill in the art to prepare a conjugate of HAS and an active agent wherein the active agent is G-CSF.

As a result, no special technical features exist among the different groups because the inventions in Groups I-III fail to make a contribution over the prior art with

respect to novelty and inventive step. In conclusion, there is a lack of unity of inventions, and therefore restriction for examination purposes as indicated is proper.

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

HAS conjugates of G-CSF conjugated via various functional groups and linkers.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. Specifically, Applicants are required to elect a single disclosed structure for a HAS/G-CSF conjugate, identifying the functional groups of the reactants and the structure of the linker, if a linker is present in the conjugate. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise require all the limitations of an allowed generic claim. Currently, the following claim(s) are generic: claims 1, 52 and 77.

Due to the complexity of the above set forth election/restriction requirements, a telephone call was not made to the applicant's agent to request an oral election. See MPEP § 812.01.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention or species.

Should applicant traverse on the ground that the inventions have unity of invention (37 CFR 1.475(a)), applicant must provide reasons in support thereof.

Applicant may submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case.

Where such evidence or admission is provided by applicant, if the examiner finds one of

Art Unit: 1623

the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

The examiner has required restriction between product and process claims.

Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder.

All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP

Application/Control Number: 10/567,266 Page 8

Art Unit: 1623

§ 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. **Failure to do so may result in a loss of the right to rejoinder**. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to SCARLETT GOON whose telephone number is 571-270-5241. The examiner can normally be reached on Mon - Thu 7:00 am - 4 pm and every other Fri 7:00 am - 12 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Shaojia Jiang can be reached on 571-272-0627. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
